

Zuckerman postdoctoral positions in ecology and evolution at the University of Haifa, Israel

The Department of Evolutionary and Environmental Biology and the Institute of Evolution at the University of Haifa in Israel solicits high-achieving postdoctoral scholars from premier universities in the United States and Canada to apply for the [Zuckerman Postdoctoral Scholars Program](#) and conduct enlightening research at the heart of the Carmel nature reserve in the green North of Israel. We offer a diverse, interdisciplinary, international, and multilingual work environment. The research run by the various groups ranges from lab experiments and field studies, through behavioral, developmental, cellular, molecular, and genetic assays, up to genomic/transcriptomic/microbiome analyses, and bioinformatics. Researchers will have opportunities for collaboration with research groups working in various fields, with organisms ranging from bacteria to mammals and agricultural crops, and employing complementary techniques from tracking animal flight to evolutionary genomics.

Why come to us?

1. Dedicated and personal treatment to every student and researcher.
2. Expertise in topical and in-demand fields such as environment, agriculture, biotech, and cleantech
3. Various areas in Bioinformatics, from the virus and the microbe level, to the human body
4. Advanced research labs focusing on theoretical and experimental research, with ample international exposure and collaboration.
